Workshop 1 – Basic JavaScript Application

Topics:

- HTML: ij.
- DOM
- HTML elements and attributes
- CSS 7
- Adding styple
 - Bootstrap
- JavaScript 3
- Adding JavaScript
- Variables
- Functions
 - Arrays
- Objects

Prerequisites:

- IDE WebStorm
- GIT
- Chrome Browser 3 5 3

Demo:

- Create new project in WebStorm('frontdev');
 - Create HTML file 'index.html';
- The file 'index.html' has the following content: 3.5.3.

```
<meta charset="UTF-8">
                                                                     <title>Demo HR</title>
<!DOCTYPE html>
                                                                                          </head>
                                   <head>
                                                                                                          <bod>
                  <html>
```

```
Here you can access the list of employees or you can access the page for adding a new employee.
                                     This is the home page of our HR application
                                                                          <div id="pagedescription">
<h1>H1>HR Home Page</h1>
                                                                                                                                                                                                                   </bod>>
                                                                                                                                                                                                                                                        </html>
                                                                                                                                                                               </div>
```

- In WebStorm right-click on 'index.html' file: Open in browser -> Chrome
- 4. In WebStorm right-click on 'index.'5. We see in browser our html page:

HR Home Page

This is the home page of our HR application

Here you can access the list of employees or you can access the page for adding a new employee

On element we add the 'style' attribute the font color and size: 6.

```
This is the home page of our HR
                         application
```

Inside the <head> element we add a <style> element where we change the color for H1 elements: 7

8. Now our page looks like this:

HR Home Page

This is the home page of our HR application

Here you can access the list of employees or you can access the page for adding a new employee.

For adding external CSS files we create a new folder 'css' and inside it we create a file 'main.css' 6

```
with the following content:
   .description {
    text-align: center;
    color: #330099;
}
```

10. We load the external CSS file inside our HTML page. Inside the <head> attribute we add:

```
<link rel="stylesheet" type="text/css" href="css/main.css"/>
```

11. We add the created CSS class on our<div> element:

```
<div id="pagedescription" class="description">
```

12. We add Bootstrap CSS framework:

```
href="//maxcdn.bootstrapcdn.com/bootstrap/3.2.0/css/bootstrap.min.css"/>
<link rel="stylesheet" type="text/css"
```

13. We add a HTML list with a link to our listing page:

```
class="list-group-item"><a href="list.html">Employees list</a>
<div id="appmenu" class="description">
                          </u1>
```

14. The page will look like this:

This is the home page of our HR application

```
Here you can access the list of employees or you can access the page for adding a new employee.
                                                                                                                                                        Add employee
```

15. We add 2 buttons:

```
href="//maxcdn.bootstrapcdn.com/bootstrap/3.2.0/css/bootstrap.min.css"/>
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   'none';
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           <script type="text/javascript" src="scripts/app.js"></script>
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              <link rel="stylesheet" type="text/css" href="css/main.css"/>
                                                                                                                                                                                                                                                                                                                                                                                              document.getElementById("appmenu").style.display =
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       document.getElementById("appmenu").style.display =
                                         <button type="button" onclick="showMenu()" class="btn btn-</pre>
                                                                                                                       <button type="button" onclick="hideMenu()" class="btn btn-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      <link rel="stylesheet" type="text/css"</pre>
                                                                                                                                                                                                                                                                                                       <script type="text/javascript">
                                                                                                                                                                                                                                                                                                                                                     function showMenu() {
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         function hideMenu() {
                                                                        default">Show Menu</button>
                                                                                                                                                       default">Hide Menu</button>

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              </div>
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 </div>
                                                                                                                                                                                                                                                                                                                                                                                             salary));
```

Exercises:

- Refresh the employees list automatically when we add a new employee;
 - Add table style from Bootstrap(http://getbootstrap.com/css/#tables);
- Create a new button with the label 'Salary total'. When the button is pressed create a new HTML element on page which displays the sum of salaries; 1. 2. 3.
- Create a new button with the label 'Delete last employee'. When the button is pressed the last employee from the 'employeeList' array will be deleted; 4.
